

ABSTRACT

Disclosed are a photopolymerizable composition and a recording material containing the composition. The composition comprises a polymerizable compound having an ethylenic unsaturated bond, a compound of the following general formula (1), and a radical generator that interacts with the compound of formula (1) to generate a radical. In formula (1), each of R¹, R² and R⁴ is an aliphatic or aromatic group; R³ is a group shown below; R⁵ is a hydrogen atom, or an aliphatic, aromatic or heterocyclic group; Each of L¹ to L⁴ is a substituted or unsubstituted methine group; Each of Z¹ to Z³ is an atomic group which forms a 5-membered nitrogen-containing hetero ring; and X⁻ is a group which forms an anion.
